SHORT DESCRIPTION

Accessibility features built into Windows 11, including various tools to assist neurodiverse people.

MAIN FEATURES

Immersive Reader: Makes web pages easier to read by removing visual clutter and customizing spacing, color, zoom, and more.

Focus sessions: Helps to build healthy digital habits and boost productivity.

Voice typing: Thanks to this function, you can use your voice to write a document or email.

Narrator: You can hear what is on your screen with built-in screen reader for Windows.

Display and vision control: Makes it possible to personalize brightness, cursor, text size, colour, and more.

HELPS WITH

Using a computer: The various functions offered by Microsoft make it easier for people with disabilities to use digital tools. They reduce fatigue and make it easier to focus.

Reading: Screen reader and narrator, display and vision functions help people with difficulties decoding text to navigate websites and documents.

Writing: Voice writing can help people who have difficulties with spelling or hand-eye coordination.
